

**Listing of Claims**

1. (Currently Amended) ~~A~~An apparatus comprising:  
a computer with a display projecting configured to project a graphical user interface to a  
user, said graphical user interface displaying form content and HTML content in a common  
window,

wherein said form content and said HTML content are rendered and controlled by a Java  
applet and displayed in a Java applet execution in a browser in said common window, said Java  
applet execution providing browsing capabilities to a user based on user interaction between  
different pages of HTML content displayed in said Java applet execution.

2. (Currently Amended) The ~~computer apparatus~~ according to claim 1, wherein said  
graphical user interface includes tabs permitting access to said form content having said different  
pages of HTML content.

3-8. (Cancelled).

9. (Currently Amended) A system comprising:  
~~for displaying forms and HTML content comprising:~~  
a display displaying configured to display a graphical user interface having at least one  
window;

a processor running configured to execute a browser program and outputting output  
information to said display;

wherein said processor receives form content from a Java applet and HTML content from  
said Java applet, combines said form content and said HTML content in a said browser program  
and outputs the combined content to said display,

wherein said HTML content is rendered and controlled by said Java applet and rendered  
inside a Java execution in said at least one window, and

wherein said Java applet provides browsing capabilities to a user based on user  
interaction.

10. (Original) The system according to claim 9, wherein said Java applet presents said form content in a window with tabs permitting selection of said form content.

11. (Original) The system according to claim 9, wherein said Java applet includes handling of activation of a back button.

12. (Currently Amended) A system comprising:  
~~for displaying information downloaded from the internet comprising:~~  
a processor configured to receive ~~that receives~~ said information from the internet, said information including HTML content, said processor configured to execute ~~running~~ a browser program and a Java applet, said processor rendering ~~configured to render~~ a browser window, configured to render ~~rendering~~ a Java execution related to said running Java applet, and configured to render ~~rendering~~ said HTML for display on a display device,

wherein said HTML content is rendered and controlled by said Java applet and rendered inside said Java execution,

wherein said Java execution is rendered inside said browser window, and

wherein said Java applet provides browsing capabilities ~~to a user based on user interaction.~~

13. (Previously presented) The system according to claim 12, wherein said Java applet generates tabs for said Java execution, wherein said Java execution further comprises:

said tabs,

wherein each tab hosts a separate form of one of said Java execution and a Java execution from the Internet.

14. (Currently Amended) The system according to claim 13, wherein said processor receives navigation commands ~~from a user~~ and downloads additional HTML content from the Internet, said processor adding a current page to a history stack in said browser, hiding said Java execution, and rendering said additional HTML content.

15. (Currently Amended) The system according to claim 13, wherein said processor receives navigation commands ~~from a user~~ and executes at least one additional Java applet, said processor adding a current execution to a history stack in said browser, adding an additional tab to said Java execution, and rendering a new Java execution related to said at least one additional Java applet under said additional tab.

16. (Previously Presented) The system according to claim 9, wherein said processor outputs said HTML content and said form content to be displayed in a Java applet execution related to said Java applet.
